

Follow the 4 steps below to print this sheet to find the size of your cane.

STEP 1 - Remove the rubber tip from your walking cane.

Helpful info to take off a rubber tip that is difficult to remove...

1. Put the cane upside down and use a turning motion to twist the cane tip off. 2. Use a hair dryer to heat up the rubber material to make it softer. 3. Use something like a heavy duty paperclip to break suction seal between tip and cane shaft. Be careful not to scratch cane shaft.

STEP 2 - Print this page with the correct printer settings

You must confirm that the printer settings are correct so that this page will print to its actual size. Depending on your computer or operating system the setting name will be different. Look for one of the names below or something similar and make sure it is either set to NONE, OFF, or 100%. Also confirm that "Scale to Fit" is not selected.

Scale

STEP 3 - Use a quarter to Confirm Size of printed page.

Place a quarter on this quarter image to confirm the size matches. Once size is confirmed proceed to STEP 4

STEP 4 - Match the end of your cane shaft to the circles below

Make sure the dotted lines touch exactly to the sides of your cane. (Do not purchase cane accessories larger or smaller than measured size of cane)

Please NOTE: Make sure to measure the cane shaft with the cane tip removed
